

Tips for Success

We Help You Grow Simply search "Amaryllis with Devin Wallien" to find helpful videos growing your plants. Further information and growing tips can be found at RobertasUniqueGardens.com & QVC.com

Amaryllis is leaning to one side Make sure to slightly rotate your pot once a week so that all sides of your plant receive even amounts of sunlight during the growing season. This will make sure your plant doesn't lean to one side. It is wise to place a heavy object at the base of the pot to keep it from tipping over once the flowers have fully opened.

Tips for Faster Blooms To get flowers the fastest from your Amaryllis, after planting them place the container(s) in the warmest area of the home. You may have an area on the floor that is particularly warm, or on top of the fridge. This warmth will activate the bulb to start growing. Once you see signs of foliage starting, place the bulb in a sunny window. Foliage will quickly form. As flower spikes begin to grow you can move them to a cooler area of the home. This will help the flowers remain on your plants even longer.

Growing Amaryllis in the Garden Amaryllis are beautiful when grown in the garden either as an annual or if you live in zones 8-10 they will come back every year.

Amaryllis isn't just for Christmas time! These exuberant, richly colored flowers look good any time of year. This is your chance to bring their beauty to your home during the spring and Summer season. Each collection brings a jumbo Dutch bulb that produces huge deep red blossoms in about 4-8 weeks from planting. Included is a decorative pot in the appearance of a watering can. Four different choices of watering can colors, a color to match any room!

Quick Reference

-  **Plant Type** Tropical
-  **Light/Sun** Bright Light
-  **Mature Height** 18-20"
-  **Mature Spread** 4-6"
-  **Bloom Time** Spring & Summer
-  **USDA Hardiness Zones** 9 to 11

Plant Caretaking

Upon Arrival Please take plants out of the box immediately and remove any shipping materials from around the plants. If unable to plant right away, you may store bulb in cool, dry area such as a refrigerator, basement or garage for up to 3-4 weeks.

Planting Depth & Spacing Plant bulb so that roughly 1/3 to 1/2 half of the bulb is exposed above the top of the soil line.

Potted Plants Amaryllis bulbs like to be grown in small containers. One bulb should be grown in a 6-7" container. You may also plant 3 bulbs in a 10-12" pot. It is often a good idea to place a heavy object at the base of the pot because as flowers bloom they can get top heavy and cause the pot to fall over.

Soil Preparation You may grow bulbs in any commercial potting mix. If using a cocofiber disk, simply add water until the disk turns into a light, fluffy condition.

Watering Water upon planting and about once every 7-10 days. Bulbs do not like soggy conditions, so water only as needed.

Fertilizer Use Roberta's Bounty a couple weeks after planting and then once or twice a month all summer long.

Pet Considerations Ensure your pets do not consume plants. Some plants are toxic to pets. Do your diligence to protect your pet.

After Bloom Care While many people decide to purchase new amaryllis every year, this is not necessary. Once your bulbs have finished flowering cut the old flowers from the stems, but keep the foliage intact and keep by a sunny window inside the home. Your bulbs may continue to produce new foliage and even flowers. Once fall returns, cut all foliage off just above the top of the bulb and store in a dark cool area like a garage or basement for 8-10 weeks. After this period of rest, bring the potted plants back into a sunny area of the home, repot in fresh soil and bulbs should start to regenerate growth within a few weeks.

Planting Steps

Step 1 Remove plastic bag or sleeve from around the bulbs and discard any packing materials. If necessary, you may store bulbs for a month or longer in a cool dry place.

Step 2 Select a pot that is roughly one inch larger in diameter than the size of the bulb. Fill the pot about halfway up with growing material. If using a cocofiber disk, place disk in large bowl and add about 3-4 cups of water and wait 10 minutes for the disk to soak up the liquid. The cocofiber material should be easy to work with. If it is still too dry, add more water until it is the right consistency.

Step 3 With the pointed end facing up, nestle the amaryllis bulb on top of the growing material. Firmly fill the rest of the pot around the sides of the bulb with more growing material. Allow about 1/3 to 1/2 of the bulb to be exposed above the soil line. The top of the soil line should be about one inch below the lip of the pot to allow for watering.

Step 4 Water bulbs in thoroughly and place container in warm, sunny area of the home. Continue to water about once every 7-10 days. They prefer to dry out between watering.

Step 5 Amaryllis should begin blooming in about 5-10 weeks inside the home. Flowers can get quite top heavy, it is recommended to place something heavy like a book, vase or something else next to the base of the pot so that it does not tip over. You can also place the plastic container in a heavier clay pot for extra support.
