

Tips for Success

We Help You Grow!: To learn how to overwinter your Geranium, simply search "Overwintering Geranium with Devin Wallien for his informative video. Further information and growing tips can be found at RobertasUniqueGardens.com & QVC.com

Plants look Dry or Foliage appears Lackluster: Sometimes plants may appear dried out and wilted after the voyage. Do not despair. When this happens the foliage may look lackluster but the rootstock is still perfectly healthy and alive. To plump your plants back up, water them and wait 5 minutes and then water them again. This will generally rehydrate them. Keep these plants well-watered until you can re-plant them into larger containers or in the garden within the next week. If plants arrive dry, it is often because the roots have outgrown the small shipping pots and need more room to grow; roots tend to dry out quickly in small containers. Your plants are very much alive and when you transplant them into larger pots or the earth, they will start growing quickly! So, re-plant them as soon as possible. Remove any yellow or brown foliage. If a lot of the plant's foliage has yellowed, you may cut the foliage back to just above the soil line. This will give your plant a chance to restart, and it encourages bushier, thicker growth.

Ivy Trailing Geranium: Inspired by the incredible balcony and window boxes of Switzerland and Europe, we bring you the two highest performing Ivy Trailing Geranium in the world. Perfectly paired together, the Sophie Pink & Bright Red produce unreal amounts of colorful blooms from late spring till the first frost. They gracefully overflow over the edges of containers, hanging baskets and window boxes and are always self cleaning, making them even more enjoyable to grow. You've never seen this many flowers for this long.

Geranium or Pelargonium?: These are often called Geranium but are in fact Pelargonium; however, they do fall in the same family as Geranium. These plants are originally native to South Africa where they grow into luxurious flowering shrubs. For our home garden, you can count on these blooming all summer long.

In the Garden or in Containers?: Anyone can plant these in the ground. While typically classified as annuals, they are in fact tender perennials, meaning if you live where winters stay warm (above 40F) these will grow all year long. If you live where winters are cold but want to plant them in the ground, you can treat them as annuals and discard at the end of the season, or dig them up and pot them up to store them over winter. To winterize them, follow the instructions inside.

Position Guide: A/B - Sofie Pink; C/D - Bright Red

Ivy Trailing Geranium

Pelargonium peltatum hybrids (Sophie Pink & Bright Red)

We aren't happy if you aren't happy. If you have any questions regarding your order please call us at **1-765-525-4065** during the hours of 8:30 am and 4:30 pm EST.

You can email questions to us at: customerservice@robertasinc.com.

If your bulbs, cuttings, etc. do not sprout, or your plant dies within 90 days from the date of shipment, we will send you a replacement free of charge. We cannot accept responsibility for losses due to extreme weather or neglect. Simply call us at the above toll free number or fill out the plant replacement form on our website at RobertasUniqueGardens.com.

Roberta's will replace it with a similar or comparable plant at no charge. If your replacement is not available or it is too late in the season to ship, it will ship the following year.

Annual and Tropical Plants

Quick Reference

 **Plant Type:** Annual

 **Light/Sun:** Full to Partial Sun

 **Mature Height:** 12-16"

 **Mature Spread:** 20-24"

 **Bloom Time:** Spring to Fall

 **USDA Hardiness Zones:** 10 to 11

Plant Caretaking

Upon Arrival: Please take plants out of the box immediately and remove any shipping materials from around the plants. Give them some water and place them in a warm sunny area for 1-2 days before replanting.

Planting Depth & Spacing: Dig a deep enough hole so that the entire plant easily fits into the hole and the top of the soil line of your plant is flush with the top of the soil in the hole you have dug. It is important that the soil line of your plant does not protrude above the soil line in the ground or container. Space plants about 12" apart in the garden.

Potted Plants: Make sure your container has holes to allow excess water to drain. You may pot one plant in a 8-12" container or place multiple in a larger container.

Soil Preparation: If your soil is clayish, amend it with standard potting mix to improve drainage. For containers, any standard bagged potting mix is fine.

Watering: To determine if your plant needs water, put your finger in the top of the soil and if the top inch is dry, it is time to water. It is important to make sure young plants do not experience long periods of dryness. However, they also do not like soggy conditions. Once adapted to their new home they will become more drought tolerant.

Fertilizer: Use Roberta's Bounty a couple weeks after planting and then once or twice a month all summer long.

Pet Considerations: Ensure your pets do not consume plants.

Winter Season: If you live where the winters dip below 35F, bring the containers inside the home, basement, shed, garage or anywhere else that will shelter your plants from the cold. Elevate them off the ground. During the winter, allow them to get very dry, watering no more than once a month or so. In the following spring, once the threat of frost is eliminated bring plants back outdoors. If you live where winters are warm, plants may continue blooming all winter long. Search online "Overwintering Geranium with Devin Wallien" for a quick tutorial.

Deadheading: It is important to cut away old flowers in order to allow new ones to form. This will bring much more flowers to your plants.

Planting Steps

Step 1 Remove plants from their box and take off other packing materials. Open your box outside or somewhere you don't mind getting messy, as some of the soil may have been shaken loose in transit.

Step 2 Check if your plant is thirsty. They probably need a nice drink of water after their voyage. If the plant feels light or the soil is dry to the touch, give your plants a watering.

Step 3 Allow your plants time to adjust to their new home before re-planting by placing them in a warm sunny spot for 1-2 days. Then they will be ready for re-planting with renewed vigor.

Step 4 Pull away or cut off any yellow or brown leaves, or any old flowers – this is normal.

Step 5 Transplant into the garden or containers as soon as evening temperatures stay above 40F. Dig holes the width of the root ball and deep enough so that the original top of the soil is flush with the new soil line. Water the new location before and after planting your plant. This will help the young roots stay hydrated. Once you've placed your plant in the hole, fill in the rest of the hole with extra soil or potting mix, ensuring the entire root system is covered with soil.
