

Tips for Success

Water your plants immediately after taking them out of the box. Give them enough water so that the soil appears damp and water trickles out the bottom of the pot.

Time to Plant! Select a location in a well-drained, sunny location. Junipers can become leggy if not given enough sun. The only spot where a juniper will not be happy is in wet, boggy locations..

Space your plants 5-6 feet apart to allow good air flow. Junipers are great street shrubs because they tolerate pollution and salt well.

Junipers combine well with a wide variety of trees, shrubs, perennials and groundcovers. Plant alongside plants with similar cultivation needs, like dwarf bamboo, sage and roses.

Nothing needs to be done to prepare this plant for winter.

Roberta's Gardens PLANTING AND GROWING GUIDE

Juniper Montana Moss®
Juniperus chinensis

We aren't happy if you aren't happy. If you have any questions regarding your order please call us at **1-765-525-4065** during the hours of 8:30 am and 4:30 pm EST. You can email questions to us at: customerservice@robertasinc.com.

If your bulbs, cuttings, etc. do not sprout, or your plant dies within one year from the date of shipment, we will send you a replacement free of charge. We cannot accept responsibility for losses due to extreme weather or neglect. Simply call us at the above toll tree number or fill out the plant replacement form on our website at RobertasUniqueGardens.com.

Roberta's will replace it with a similar or comparable plant at no charge. If your replacement is not available or it is too late in the season to ship, it will ship the following year.

Quick Reference

 **Plant Type:** Perennial

 **Light/Sun:** Full Sun

 **Mature Height:** 2'-4'

 **Mature Spread:** 3'-5'

 **Bloom Time:** Evergreen

 **USDA Hardiness Zones:** 4 to 9

Plant Caretaking

Upon Arrival: Please take plants out of the box immediately and remove any shipping materials from around the plants. Give them some water and place them in a warm sunny area for 1-2 days before replanting.

Planting Depth & Spacing: Dig a hole as deep as and 2-3 times the width of your root ball. Plant in a sunny location 3 to 5 feet apart.

Soil: Junipers prefer open, sunny locations in well-drained soils. They will tolerate a wide range of pH levels and are very tolerant of dry, clay soils.

Watering: Water in well when planting, then after that, it has very low water needs.

Fertilizer: Use Roberta's Bounty when planting and in the spring until well established.

Pruning: Little to no pruning is needed for this plant, but can be done selectively as needed to control spread.

Pet Considerations: Ensure your pets do not consume plants.

Planting Steps

Step 1 Remove plants from their box and take off other packing materials. Open your box outside or somewhere you don't mind getting messy, as some of the soil may have been shaken loose in transit.

Step 2 Check if your plant is thirsty. They probably need a nice drink of water after their voyage. If the plant feels light or the soil is dry to the touch, give your plants a watering.

Step 3 Allow your plants time to adjust to their new home before re-planting by placing them in a warm sunny spot for 1-2 days. Then they will be ready for re-planting with renewed vigor.

Step 4 Pull away or cut off any yellow or brown leaves, or any old flowers – this is normal.

Step 5 Transplant into the garden.
