

## Tips for Success

**We Help You Grow!:** To find various videos on how to best grow your Monstera, simply search "Monstera deliciosa with Devin Wallien" for his informative videos. More resources can be found at [robertasgardens.net](http://robertasgardens.net) and [QVC.com](http://QVC.com)

**Plants look Dry or Foliage appears Lackluster:** Sometimes plants may appear dried out and wilted after the voyage. Do not despair. When this happens the foliage may look lackluster but the rootstock is still perfectly healthy and alive. To plump your plants back up, water them and wait 5 minutes and then water them again. This will generally rehydrate them. Keep these plants well-watered until you can re-plant them into larger containers or in the garden within the next week. If plants arrive dry, it is often because the roots have outgrown the small shipping pots and need more room to grow; roots tend to dry out quickly in small containers. Your plants are very much alive and when you transplant them into larger pots or the earth, they will start growing quickly! So, re-plant them as soon as possible. Remove any yellow or brown foliage by cutting at the base of the stem near the soil.

**Variegated Monstera Thai Constellation:** Here's your chance to add one of the rarest, most hard to find, desired, googled, instagrammed houseplant to your home, at the best value ever. 3 years of planning and growing, we finally secured a small quantity of the HUGELY popular Variegated Monstera Thai Constellation! With Swiss cheese leaves like the classic Monstera, this takes it to the next level with outer galactic white marbling variegation on every leaf. Easy to grow, long lived, each year it gets more intriguing in your home.

**Support:** It can be very helpful to provide some support for your Monstera such as a bamboo stake, dowel rod or moss pole. This will allow your plant to climb up, just as nature intended. By allowing it to climb, it will grow much faster producing larger and larger leaves.

*Annual and Tropical Plants*

## Quick Reference

 **Plant Type:** Tropical

 **Light/Sun:** Partial Sun to Partial Shade

 **Mature Height:** 2-4'

 **Mature Spread:** 2-4'

 **Bloom Time:** n/a

 **USDA Hardiness Zones:** 10 to 11

## Plant Caretaking

**Upon Arrival:** Please take plants out of the box immediately and remove any shipping materials from around the plants. Give them some water and place them in a warm sunny area for 1-2 days before replanting.

**Planting Depth & Spacing:** These are House Plants and should be planted in containers, unless you live where winter temperatures never dip below 55F. Dig a deep enough hole so that the entire plant easily fits into the hole and the top of the soil line of your plant is flush with the top of the soil in the hole you have dug. It is important that the soil line of your plant does not protrude above the soil line in the container.

**Potted Plants:** Make sure your container has holes to allow excess water to drain. Place one plant in a 6-12" container. Gradually over the course of a few years you can pot them up into slightly larger pots, eventually reaching a 24" pot after 3-5 years.

**Soil Preparation:** Any rich bagged potting mix for houseplants is fine. You may find special indoor plant potting mix, and that is also great, as long as the soil is new and drains well. Adding Peat to the potting mix can help with water retention, which the Monstera will appreciate.

**Watering:** It is important to make sure young plants do not experience long periods of dryness. Monstera prefers to maintain a moist, but not sopping wet soil during the warm, active growing season. In the winter, allow the top inch of soil to dry out before watering. They tend to be quite resilient.

**Fertilizer:** Use Roberta's Bounty a couple weeks after planting and then once or twice a month all year long.

**Pet Considerations:** Ensure your pets do not consume plants.

**Lighting:** These plants are great houseplants that can be grown inside year round. Inside the home, partial diffused lighting is best. They do not need to be on the window sill of your sunniest window. A bright room is typically enough, or in an east or west facing window. You may place your plants outside during the summer time as long as evening temperatures remain above 55F. This will encourage robust growth. Keep out of direct sunlight while outside.

**Winter Care:** These plants need to stay warm during the winter. If you placed your plants outside during the summer, bring them back indoors once nights start to dip towards 55F. It can be helpful to use a supplementary grow light bulb during the winter months to help keep them happy.

## Planting Steps

**Step 1** Remove plants from their box and take off other packing materials. Open your box outside or somewhere you don't mind getting messy, as some of the soil may have been shaken loose in transit.

**Step 2** Check if your plant is thirsty. They probably need a nice drink of water after their voyage. If the plant feels light or the soil is dry to the touch, give your plants a watering.

**Step 3** Allow your plants time to adjust to their new home before re-planting by placing them in a warm sunny window for 1-2 days.

**Step 4** Pull away or cut off any yellow or brown leaves, or any old flowers – this is normal.

**Step 5** Transplant into containers as soon as possible. Dig holes the width of the root ball and deep enough so that the original top of the soil is flush with the new soil line. Water the new soil before and after planting your plant. This will help the young roots stay hydrated. Once you've placed your plant in the hole, fill in the rest of the hole with extra potting mix, ensuring the entire root system is covered with soil. Only plant directly in the ground if you live where winter temperatures stay above 55F.
