

Tips for Success

We Help You Grow! For a quick video demonstrating how to get the most out of your Hardy Geranium, simply search "Hardy Geranium with Devin Wallien" to find his informative video online. Further information and growing tips can be found at RobertasUniqueGardens.com & QVC.com

Plants look Dry or Foliage appears Lackluster: Sometimes plants may appear dried out and wilted after the voyage. Do not despair. When this happens the foliage may look lackluster but the rootstock is still perfectly healthy and alive. To plump your plants back up, water them and wait 5 minutes and then water them again. This will generally rehydrate them. Keep these plants well-watered until you can re-plant them into larger containers or in the garden within the next week. If plants arrive dry, it is often because the roots have outgrown the small shipping pots and need more room to grow; roots tend to dry out quickly in small containers. Your plants are very much alive and when you transplant them into larger pots or the earth, they will start growing quickly! So, re-plant them as soon as possible. Remove any yellow or brown foliage. If a lot of the plant's foliage has yellowed, you may cut the foliage back to just above the soil line. This will give your plant a chance to restart, and it encourages bushier, thicker growth.

Time to Plant! Water your plants immediately after taking them out of the box. Give them enough water so that the soil appears damp and water trickles out the bottom of the pot. Your plants are now ready to be replanted. Follow the planting guide inside for detailed instructions on how to most effectively plant your new plants.

First Year Maintenance: For perennials, the first year (or sometimes two) will require additional maintenance. During the first season of growth, even if the plant is known to be drought-tolerant, it is very important to water your plants on a regular basis, meaning up to 3-4 times per week. When plants are in their infancy stage, they need to be watered by their caretaker until they've had a chance to build a strong enough root system to subsist on their own. If you are experiencing severe heat, drought like conditions, or your plants appear consistently droopy, you may need to water your plants almost every day.

Breeder Marco's Hardy Geranium: The best of Hardy Geranium yet, hand selected by one of the very best plant breeders in the world. This brings seven different colors of hardy geranium to a single collection – colors from magenta, deep purple, blue, pink, white with pink veins, and more! All plants are thoroughly winter hardy and bloom from late spring to the first frost, up to 6 months! Plant at the front of the border, between perennials, in rock gardens, slopes, or in containers!

We aren't happy if you aren't happy. If you have any questions regarding your order please call us at **1-765-525-4065** during the hours of 8:30 am and 4:30 pm EST. You can email questions to us at: customerservice@robertasinc.com.

If your bulbs, cuttings, etc. do not sprout, or your plant dies within one year from the date of shipment, we will send you a replacement free of charge. We cannot accept responsibility for losses due to extreme weather or neglect. Simply call us at the above toll tree number or fill out the plant replacement form on our website at RobertasUniqueGardens.com.

Roberta's will replace it with a similar or comparable plant at no charge. If your replacement is not available or it is too late in the season to ship, it will ship the following year.

Quick Reference

 **Plant Type:** Perennial

 **Light/Sun:** Full to Partial Sun

 **Mature Height:** 15-20"

 **Mature Spread:** 24-30"

 **Bloom Time:** Late Spring
to Fall

 **USDA Hardiness Zones:** 3 to 8

Plant Caretaking

Upon Arrival: Please take plants out of the box immediately and remove any shipping materials from around the plants. Give them some water and place them in a warm sunny area for 1-2 days before replanting.

Planting Depth & Spacing: Dig a deep enough hole so that the entire plant easily fits into the hole and the top of the soil line of your plant is flush with the top of the soil in the hole you have dug. It is important that the soil line of your plant does not protrude above the soil line in the ground or container. Space plants about the mature spread of the plant as shown in the Quick Reference section. They produce wonderful clumping growth that allows them to grow well into one another.

Potted Plants: Make sure your container has holes to allow excess water to drain. You may replot one plant in a 8-12" container or place multiple in a larger container.

Soil Preparation: If your soil is clayish, amend it with standard potting mix to improve drainage.

Watering: To determine if your plant needs water, put your finger in the top of the soil and if the top inch is dry, it is time to water. It is important to make sure young plants do not experience long periods of dryness. However, they also do not like soggy conditions.

Fertilizer: Use Roberta's Bounty a couple weeks after planting and then once or twice a month all summer long.

Pet Considerations: Ensure your pets do not consume plants.

Grooming & Deadheading: With proper grooming, you can help these bloom for months and months. Simply cut away spent flowers as they begin to go to seed. By cutting any possible seeds you will encourage better foliar growth and more flowers. Also the seeds tend to make the plants look stringy, so cutting them away is nice for aesthetics as well.

Pruning: These plants appreciate being sheared back to just above the soil line whenever they start to look strung out or spotty. They can handle this at any time of the year. Giving them a deep shear in early spring is very beneficial for encouraging bushy new growth.

Dividing: These clump forming perennials will appreciate being divided every 2-3 years. This will allow for maximum flower formation and dense growth. Simply take a trowel or shovel and stick into the middle of the plant and divide into two pieces and replant.

Planting Steps

Step 1 Remove plants from their box and take off other packing materials. Open your box outside or somewhere you don't mind getting messy, as some of the soil may have been shaken loose in transit.

Step 2 Check if your plant is thirsty. They probably need a nice drink of water after their voyage. If the plant feels light or the soil is dry to the touch, give your plants a watering.

Step 3 Allow your plants time to adjust to their new home before re-planting by placing them in a warm sunny spot for 1-2 days. Then they will be ready for re-planting with renewed vigor.

Step 4 Pull away or cut off any yellow or brown leaves, or any old flowers – this is normal.

Step 5 Transplant into the garden or containers as soon as evening temperatures stay above 40F. Dig holes the width of the root ball and deep enough so that the original top of the soil is flush with the new soil line. Water the new location before and after planting your plant. This will help the young roots stay hydrated. Once you've placed your plant in the hole, fill in the rest of the hole with extra soil or potting mix, ensuring the entire root system is covered with soil.
