

## Tips for Success

**Water:** Water your plants immediately after taking them out of the box. Give them enough water so that the soil appears damp and water trickles out the bottom of the pot.

**Plants look Dry or Foliage appears Lackluster:** Sometimes plants may appear dried out and wilted after the voyage. Do not despair. When this happens the foliage may look lackluster but the rootstock is still perfectly healthy and alive. To plump your plants back up, water them and wait 5 minutes and then water them again. This will generally rehydrate them. Keep these plants well-watered until you can re-plant them into larger containers or in the garden within the next week. If plants arrive dry, it is often because the roots have outgrown the small shipping pots and need more room to grow; roots tend to dry out quickly in small containers. Your plants are very much alive and when you transplant them into larger pots or the earth, they will start growing quickly! So, re-plant them as soon as possible. Remove any yellow or brown foliage. If a lot of the plant's foliage has yellowed, you may cut the foliage back to just above the soil line. This will give your plant a chance to restart, and it encourages bushier, thicker growth.

**Time to Plant!** Your plants are now ready to be replanted. Follow the planting guide inside for detailed instructions on how to most effectively plant your new plants.

**Cut Flowers:** These abundant blooming Gerber Daisies produce loads of flowers all summer long. Feel free to cut flowers as often as you'd like.

**Glorious Patio Gerber Daisies:** These brand new Glorious Patio Gebers brings a new take on a favorite. Three lovely colors of double flowered pompom like blooms is what you can expect, with blooms reaching up to five inches big! Huge flowers on compact plants make these superstars in standalone containers or mixed with other plants on your patio, balcony, or terraces. Two or three picked flowers will create an instant vase! Includes three colors, light pink, purple and yellow.

**Position Guide:** A - Light Pink, B - Purple, C - Yellow

## Quick Reference

**Plant Type:** Annual

**Light/Sun:** Full to Partial Sun

**Mature Height:** 16-20"

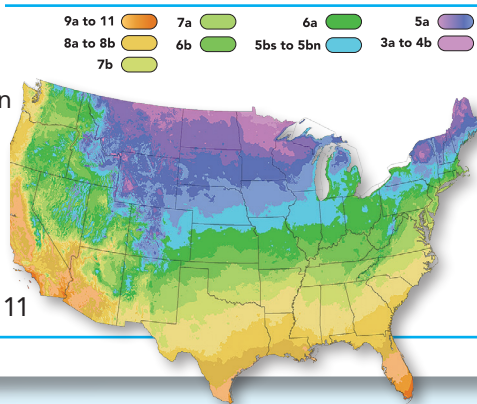

**Mature Spread:** 16-20"

**Bloom Time:** Summer to Fall

**USDA Hardiness Zones:** 10 to 11

## Plant Caretaking

**Upon Arrival:** Please take plants out of the box immediately and remove any shipping materials from around the plants. Give them some water and place them in a warm sunny area for 1-2 days before replanting.

**Planting Depth & Spacing:** These plants cannot handle a freeze, so if you plant them in the garden they will not make it through the winter unless you live where winters stay above 45F. Dig a deep enough hole so that the entire plant easily fits into the hole and the top of the soil line of your plant is flush with the top of the soil in the hole you have dug. It is important that the soil line of your plant does not protrude above the soil line in the ground or container. In the garden space about 16" apart.

**Potted Plants:** Make sure your container has holes to allow excess water to drain. You may place one plant in a 10-12" container, or plant multiple together in a larger pot.

**Soil Preparation:** Any bagged potting mix with good drainage is perfect.

**Watering:** To determine if your plant needs water, put your finger in the top of the soil and if the top inch is dry, it is time to water. It is important to make sure young plants do not experience long periods of dryness. However, they also do not like soggy conditions.

**Fertilizer:** Use Roberta's Bounty a couple weeks after planting and then once or twice a month all summer long.

**Pet Considerations:** Ensure your pets do not consume plants.

**Deadheading:** Remove old browned flowers. Cut off as close to the base of the stem as possible. This will help encourage new bud formation.

**Winter Care:** These Gerber Daisies cannot handle a freeze. Once night temperatures begin to dip below about 45F, bring potted plants indoors for the winter. Any plants growing directly in the garden should be removed at this time.

## Planting Steps

**Step 1** Remove plants from their box and take off other packing materials. Open your box outside or somewhere you don't mind getting messy, as some of the soil may have been shaken loose in transit.

**Step 2** Check if your plant is thirsty. They probably need a nice drink of water after their voyage. If the plant feels light or the soil is dry to the touch, give your plants a watering.

**Step 3** Allow your plants time to adjust to their new home before re-planting by placing them in a warm sunny spot for 1-2 days. Then they will be ready for re-planting with renewed vigor.

**Step 4** Pull away or cut off any yellow or brown leaves, or any old flowers – this is normal.

**Step 5** Transplant into the garden or containers as soon as evening temperatures stay above 40F. Dig holes the width of the root ball and deep enough so that the original top of the soil is flush with the new soil line. Water the new location before and after planting your plant. This will help the young roots stay hydrated. Once you've placed your plant in the hole, fill in the rest of the hole with extra soil or potting mix, ensuring the entire root system is covered with soil.
